

## System requirements: Internet Accountant

### AbaWebAccountant

Always use the latest version of Java or AbaStart.

### SuisseID

Your system must meet the following requirements in order to use [Post SuisseID](#) (USB stick, connected to your computer):

- Windows**  Both the 32 and 64-bit versions of the following versions of Windows are supported:
- Windows 7
  - Windows 8
  - Windows 10 (does not work with the standard browser "Edge")
- MacOS**  Both the 32 and 64-bit versions of the following versions of Mac OS X are supported:
- Mac OS X 10.9 "Maverick"
  - Mac OS X 10.10 "Yosemite"
  - Mac OS X 10.11 "El Capitan"

**Important:** The SwissStick currently only works with the applications stored on the stick.

As an alternative to the **Post SuisseID** you can now use the new [SuisseID Mobile Service](#), your personal access with your mobile phone without the need of the above mentioned **USB stick**.

### AbaScan

The client's scanner must support the following functions:

- Resolution of 300 dpi or higher
- Ability to carry out black and white scans
- PDF and/or TIFF file formats

### Data storage

The following browsers support the use of data storage, such that all of the features can be used without any restrictions:

- Internet Explorer 10 (at least)
- Google Chrome (version 31 and higher)
- Mozilla Firefox (version 25 and higher)
- Apple Safari (version 5.1 and higher)
- Microsoft Edge

### Office versions for IT data storage

The following versions of Office allow data storage to be used without any restrictions:

- Office 2013
- Microsoft Office 2010 with at least Service Pack 1
- Microsoft Office 2007 with at least Service Pack 2
- Microsoft Office for Mac 2011 with at least Service Pack 1

### Firewall and data protection

Protect your systems against unauthorised access via the Internet. Install a hardware firewall for your ADSL connection. (A hardware firewall is usually already included in modern modems/routers). We do not recommend using a software firewall/Windows firewall. Please note that a firewall alone will not protect you against viruses and you must therefore also install an antivirus program. As a general rule, the end customer must have a valid Office licence in order to use the Office WebApps.
